## Overview:

Model 6062 programmable timer is suitable for many functions that require a timed operation e.g. Access Control Applications, Siren/Bell Cut Off Module, Dialer Delay, Guard Tour Supervisory Timer, etc. Some optional functions include: One Shot, Delayed Release, Delayed Operate, Delayed Pulse and Pulser/Flasher. A new feature has been added which provides a momentary relay activation at the end of a desired timing cycle. This feature eliminates the need for having to use two (2) timers to achieve this function.

## Specifications:

## Input:

- 12VDC or 24VDC operation is selectable.

## Current Draw:

- Stand-by: 3mA, Relay energized: 40 mA .

Relay:

- Selectable relay activation at the start or end of the timing cycle.
- One (1) second momentary relay activation at the end of the timing cycle (eliminates the need to use two (2) timers for this function).

## Visual Indicators:

- LED indicates relay is energized.

## Electrical:

- Operating temperature: $-20^{\circ} \mathrm{C}$ to $49^{\circ} \mathrm{C}$ ambient.

## Features:

- Triggers via positive DC (+) voltage, dry contact closure, or removal of contact closure.
- Quick and extremely accurate time range adjustment from 1 second to 60 minutes.
- Built-in reset feature that cancels timing cycle.
- Repeat (flasher/pulse) mode.

Mechanical:

- Snap Trac compatible (order Altronix model \#ST3).
- Board Dimensions (L x W x H approx.):
$3^{\prime \prime} \times 2.5 " \times 0.75$ " (76.2mm x $63.5 \mathrm{~mm} \times 19.05 \mathrm{~mm}$ ).
- Product weight (approx.): 0.1 lb . ( 0.05 kg ).
- Shipping weight (approx.): 0.15 lb . ( 0.07 kg ).

## Installation Instructions:

1. Mount 6062 in desired location/enclosure.
2. Set proper DC Input Voltage DIP Switch 3: 12VDC ON, 24VDC OFF.
3. Refer to DIP Switch Selection and Jumper Selection Tables for desired functions (e.g.: Timing, Trigger, Pulse)
4. Measure DC input voltage before powering device to ensure proper operation.
5. Refer to Terminal Identification Table and Typical Applications fig. 1 through fig. 8. for desired wiring connections. Note: When triggering via a N.O. (normally open), momentary or maintained trigger, connect the dry contact trigger to Pos (+) and TRG terminals. When triggering via a N.C. (normally closed), momentary or maintained trigger, connect the trigger to Neg. ( - ) and TRG terminals and install a resistor [for 12VDC - 2K ( 2,000 ohm) or for 24VDC - 4.7K (4,700 ohm)] between the Pos (+) and TRG terminals (Fig. 8).
6. Enable the reset features:

- Cut J 3 when power is removed the timer will reset and not re-trigger when power is restored unless a new trigger is applied.

Note: The closed trigger and delayed pulse options will not operate if the reset feature is desired.

## DIP Switch Selection Table:

| DIP \# | Off | On |
| :--- | :--- | :--- |
| 1 | Relay energizes at the start of timing cycle.* | Relay energizes at the end of timing cycle.* |
| 2 | 1-60 Minutes timing range (trimpot adjustable). | $1-60$ Seconds timing range (trimpot adjustable). |
| 3 | 24VDC operating voltage. | 12VDC operating voltage. |
| 4 | Timing begins immediately upon trigger input. | Timing starts after removal of trigger input. |

* When relay energizes (LED is on) [N.O. \& C] switch from open to close and [N.C. \& C] switch from close to open.

## Jumper Selection Table:

| Number | Function/Description |
| :--- | :--- |
| J1 | Cutting J1 selects the pulser/flasher mode. <br> Relay will flip ON and OFF continuously in equally set timed intervals when timer is powered up. |
| J2 | Cutting J2 puts timer in delayed output mode. <br> Relay will pulse for 1 second at the end of a preset timing cycle. *DIP Switch 1 must be ON for this function. |
| J3 | 6062 will go through an initial timing cycle when first powered up unless J3 is cut. <br> If J3 is cut, timing can only be initiated via TRG terminal. |

## Terminal Identification:

| Terminal Legend | Function/Description |
| :--- | :--- |
| TRG | Applying a positive voltage will activate timing cycle. <br> Trigger voltage range: $7-12 V D C$ at 12 volt setting, 15-24VDC at 24 volt setting. |
| ,-+ | Connect 12 or 24VDC filtered and regulated voltage. <br> Refer to DIP Switch Selection Table for voltage setting. |
| N.O., C, N.C. | Dry form "C" relay contacts are rated 8A at 120VAC/28VD. |

## 6062 Typical Applications:

Fig. 1 - Timed Door Annunciator:

For this application Switch \#1 and Switch \#4 should be in the OFF position.
Fig. 2 - Guard Tour Supervisory Timer:

For this application Switch \#1 and Switch \#4 should be in the OFF position.
Fig. 3 - Swinger Eliminator:

For this application Switch \#1 should be in the OFF position and Switch \#4 should be in the ON position.
Fig. 4 - Delay Timer: Use for Door Ajar Alarm,
Delayed Activation of Digital Dialer, Defrost Cycle Timer, etc...

For this application Switch \#1 should be in the 0 N position and Switch \#4 is not used in this application.

Fig. 5 - Timed Door Strike:

For this application Switch \#1 should be in the OFF position and Switch \#4 should be in the ON position.
Fig. 6 - Timed Shunt for a Door: Use to bypass alarm contacts.

For this application Switch \#1 should be in the OFF position and Switch \#4 should be in the ON position.
Fig. 7 - Bell Cut Off Timer:

For this application Switch \#1 should be in the ON position and Switch \#4 is not used in this application.
Fig. 8 - Closed Circuit Trigger Option:

For this application a resistor [for 12VDC - 2K (2,000 Ohm) or for 24VDC - 4.7K (4,700 Ohm)] must be installed as shown (resistor not supplied).
